## SIGN ON MANAGER

STRONG AUTHENTICATION

SINGLE SIGN-ON

CONTEXT MANAGEMENT

PRIVACY MANAGEMENT

### Single Sign-On, Simplified

For many healthcare organizations, the promise of single sign-on has remained just that. CIOs brave enough to pursue its implementation have found themselves facing application vendor myopia, unwieldy implementation, or complex maintenance.

But what if you could instantly implement single sign-on for your existing systems, without requiring special behaviors from your applications? You can – with Vergence® SignOn Manager from Sentillion,® Inc.

Vergence SignOn Manager is a clinically optimized vendor-neutral solution that lets you easily add single sign-on capabilities to current and future applications. Quickly. Securely. And pragmatically. With SignOn Manager, caregivers sign on and off only once, regardless of whether they're using personal desktop systems or shared clinical workstations...accessing applications via thin or thick clients... or logging on with passwords, smart cards, tokens, or biometric devices.

In all cases, you offer a streamlined process that eliminates the need to remember or share multiple passwords and procedures. The result? Increased caregiver satisfaction, decreased frustration.

#### Free Your Caregivers from Multiple Passwords and Procedures

Vergence SignOn Manager's comprehensive features allow caregivers to replace the time spent accessing information with time spent *acting* on it:

- Instant single sign-on/sign-off
- Automatic management of multiple, diverse password policies
- On-demand authentication for applications that require re-authentication (i.e., physician order entry)
- Secure management of user credentials and log on aliases
- Disable user access to your systems in a single step
- Full compliance with the current ANSI-certified HL7 CCOW standard
- Plug and play operation with all CCOW-compliant and Vergence-Bridged applications

- Reduce multiple sign-on procedures to one, saving time and reducing complexity
- Increase caregiver satisfaction and system utilization
- Simplify password management
- Integrate multiple authentication mechanisms, including smart cards and biometrics
- Implement sign-on features designed specifically for clinical environments
- Quickly meet a critical enterprise need without disrupting your existing IT infrastructure

SIGNON MANAGER is a key component of the vendor-neutral Vergence product suite, which provides a scalable platform for building healthcare solutions that offer Strong Authentication, Single Sign-On, Context Management, and Privacy Management.

**“We viewed the single sign-on capability as a significant driver for physician satisfaction and productivity. We’d been looking at SSO products for three years, but hadn’t identified a solution that fit our needs – until Vergence.”**

**BILL SPOONER**  
Vice President and CIO  
Sharp Healthcare

### **Provide Users with a Sophisticated Log On Process They’ll Never See**

With Vergence SignOn Manager, the caregiver signs on once and SignOn Manager handles the rest. Once the caregiver is finished, he or she employs a single sign-off to exit all applications. So no application is left susceptible to unauthorized use.

### **Implement Single Sign-On Using Passwords, Smart Cards, Biometrics and More**

Unlike traditional single sign-on products, SignOn Manager offers a standards-based modular architecture that lets you implement any user authentication procedure. The system can be employed with Sentillion’s Vergence Authenticator or any third-party authentication product. When combined with Vergence Authenticator, SignOn Manager contributes to a strong authentication solution that supports smart card, token, and biometric devices. In addition, SignOn Manager is scalable, so you can expand your single sign-on solution to even more users and applications.

### **Leverage Vergence Platform Power**

SignOn Manager is powered by the Vergence Platform, a combination of hardware and software that enables healthcare organizations to optimize Vergence capabilities and meet their organizational needs for scalability and fault tolerance. SignOn Manager can be securely and remotely administered through Vergence Administrator, the Platform’s Web-based system management tool.

### **Enrich Your Existing Systems without Requiring Special Application Behaviors**

Any application can leverage the capabilities of Vergence SignOn Manager without the need for special application behaviors:

- THROUGH NATIVE CCOW COMPLIANCE – which enables applications from Cerner, Eclipsys, IDX, Siemens, and other leaders to plug directly into Vergence.
- THROUGH STANDARD VERGENCE BRIDGES – which are built into the Vergence Platform for many of the leading healthcare applications.
- AND THROUGH CUSTOM VERGENCE BRIDGES – which enable unique applications to leverage Vergence capabilities.

Because SignOn Manager offers built-in Vergence Bridges, as well as HL7 CCOW compliance, you can begin implementing single sign-on in days, not months or years.

### **Sign On for More Information...**

Meet critical needs with Vergence SignOn Manager – from Sentillion, a leading provider of healthcare technology solutions that enable information systems to work together consistently, intuitively, and securely.
