PRIVACY MANAGEMENT

Know Who Viewed What Patient Records, When and Where

Introducing Vergence® Privacy Auditor – vendor-neutral software that lets you track access to electronic patient records across multiple clinical applications. Quickly and easily. Centrally and securely.

With Vergence Privacy Auditor from Sentillion®, Inc., you'll know who viewed what electronic medical records, when, where, and how often. The system audits and reports on application access at clinical desktops throughout your enterprise.

As a result, you can better control information access and more effectively analyze application usage. You can also avoid the nearly impossible task of obtaining and deciphering audit data across multiple applications.

Consolidated, Multi-Vendor Auditing: The Practical HIPAA Solution

Vergence Privacy Auditor produces a single, consolidated audit log that can include any application – regardless of application vendor. No need to be concerned about diverse audit databases, disparate data structures, or application idiosyncrasies. Privacy Auditor lets you audit and report on whatever applications your organization employs, no matter what their function, structure, or enterprise location.

- Protect patient privacy – centrally, easily, and securely
- Ensure patient confidentiality and uncover security breaches
- Meet and exceed HIPAA privacy and security requirements
- Audit and report on system usage throughout your enterprise
- Centrally monitor and track access across multiple clinical applications
- Easily generate and analyze application utilization data

Privacy Auditor lets you track and report on system usage throughout your enterprise, allowing you to meet and exceed HIPAA privacy and security requirements.

PRIVACY AUDITOR is a key component of the vendor-neutral Vergence product suite, which provides a scalable platform for building healthcare solutions that offer Strong Authentication, Single Sign-On, Context Management, and Privacy Management.

"Privacy Auditor's ability to easily analyze and report audit data not only will help us achieve key HIPAA-related objectives, but also will assist us with broader business purposes."

RALPH JOHNSON
 Director of Computer Technology
 Maine Medical Center

It's a simple, straightforward way to address your own internal security needs, while accelerating the move toward HIPAA compliance.

Confidential patient information *stays* confidential; security breaches do not.

Create Reports from User, Patient, Application, and Other Perspectives

Privacy Auditor captures each interaction with a patient's electronic record, monitoring and recording information that includes:

- Application launch and termination
- User log on and log off
- Patient selection
- And workstation location.

These events are time-stamped and gathered into a central, secure relational database with fully documented schema. The data can be used with third-party reporting tools like Crystal Reports to generate:

- PATIENT ACCESS REPORTS – revealing who accessed a patient's record, where and how often.
- USER ACTIVITY REPORTS – detailing individual user activity over a specific period of time.
- APPLICATION UTILIZATION REPORTS – indicating the number of users and frequency of application use.

In addition, Privacy Auditor makes it easy to create additional custom reports, such as those requiring site-specific or departmental views.

Enrich Your Existing Systems without Requiring Special Application Behaviors

Any application can leverage the capabilities of Vergence Privacy Auditor without the need for special application behaviors:

- THROUGH NATIVE CCOW COMPLIANCE – which enables applications from Cerner, Eclipsys, IDX, Siemens, and other leaders to plug directly into Vergence.
- THROUGH STANDARD VERGENCE BRIDGES – which are built into the Vergence Platform for many of the leading healthcare applications.
- AND THROUGH CUSTOM VERGENCE BRIDGES – which enable unique applications to leverage Vergence capabilities.

Leverage Vergence Platform Power

Privacy Auditor is powered by the Vergence Platform, a combination of hardware and software that enables healthcare organizations to optimize Vergence capabilities and meet their organizational needs for scalability and fault tolerance. Equally key, Privacy Auditor can be securely and remotely administered through Vergence Administrator, the Platform's Web-based system management tool.

Act Now to Meet the Security Requirements of Patients and HIPAA...

Privacy Auditor can help you meet HIPAA's demand for "reasonable" measures in an extremely reasonable way. And it's backed by Sentillion, a leading provider of healthcare solutions that enable IT systems to work together consistently, intuitively, and securely. To find out more about Privacy Auditor, contact your local Sentillion representative or visit www.sentillion.com.

REQUIREMENTS:

DESKTOP ENVIRONMENTS: Windows XP, Windows 2000, Windows NT 4.0, Windows 98, Windows 95, WTS, Citrix.

APPLICATIONS TECHNOLOGIES: Windows, WTS, Citrix, Windows Internet Explorer 4.0.1 SP1 (or later), Netscape Navigator 4.06 (or later), various terminal emulators.

SYSTEM REQUIREMENTS: Microsoft SQL Server 2000, TCP/IP network connection and Vergence Platform.
